TMHE REACH REGULATION COMPLIANCE LETTER

(Updated 31.10.2022)

Introduction

REACH deals with the Registration, Evaluation, Authorization and Restriction of Chemicals and entered into force on June 1, 2007. REACH is designed to further improve the protection of human health and the environment through a clearer and faster identification of certain chemicals. This legislation of the European Union shall apply to all suppliers (inside and outside Europe) who sell, import or manufacture "articles", i.e. chemicals and / or products containing certain chemicals within the European Union.

Definitions

Substances of Very High Concern: Substances that may have serious and often irreversible effects on human health and the environment can be identified as Substances of Very High Concern (SVHCs) if the criteria are fulfilled. REACH provides a Candidate list with SVHC which is updated approximately every six months.

Article: As defined in ECHA´s (European Chemicals Agency) "Guidance on requirements for substances in articles" (https://echa.europa.eu/documents/10162/23036412/articles_en.pdf/cc2e3f93-8391-4944-88e4-efed5fb5112c) "an article is an object made from one or more substances or mixtures which were given a specific shape, surface or design during the production process". According to the Guidance an article will remain an article, even though articles are assembled or joined together, until they become waste.

REACH obligations

Registration: Manufacturers and importers of substances (on their own, in mixtures or in certain articles) have a general obligation to submit a registration to the European Chemicals Agency for each substance manufactured in or imported to EU/EES in quantities of 1 tonne or more per year and per company.

Communication: According to REACH regulation, we have the duty to inform customers of all our articles containing SVHC on the candidate list in a concentration of >0.1 weight-%. We are required to provide recipients of the article with, as a minimum, the name of the substance in order to allow safe use of the article.

Our approach

Code of Conduct for Suppliers: At Toyota Material Handling Europe (TMHE) we are committed to being the first choice partner for all customers looking for materials handling solutions. We will do this by providing high-quality, innovative products, services and added-value solutions while using resources in a sustainable, socially and environmentally responsible manner. In order to build trust and confidence and to show our commitment to Corporate Social Responsibility (CSR) throughout the entire value chain of our operations, including our suppliers. We ask all our suppliers to agree with our Code of Conduct for Suppliers, which contains following requirements regarding management of substances of concern:

"Suppliers shall comply with any applicable laws and regulations such as REACH and RoHS prohibiting or restricting the use or handling of specific substances. To ensure safe handling, movement, storage, recycling, reuse, and disposal, Suppliers shall identify, manage and list Substances of Concern as required by each TMHE entity (any presence of such substances shall be reported via prescribed reply form) and comply with applicable labelling laws and regulations for design, manufacturing, recycling and disposal."

Informing customers: At TMHE we are committed to the EU's objective to reduce the number of substances of concern such as SVHC's in circulation, as well as for transparency towards our customers, we provide this information publicly. Through our ongoing awareness raising efforts with customers on the topic of sustainability, we will direct customers to this page.

SAFE USE INSTRUCTIONS

If not stated otherwise, the identification of Candidate List substances is sufficient to allow safe use of the article throughout the whole life cycle including service life, disassembly and waste/recycling stage. Specific instructions for safe use might be available for certain articles and are enclosed in the "comment" column.
